**AutoCAD Crack+**

Revision history User editable features In AutoCAD, users can change many options, setting variables such as unit values, color palettes and screens. Different revisions of AutoCAD also have different features such as design primitives, or different dimensions of the drawing area. AutoCAD users can use a Change dimension/Constraint (acad) command to change

---

these options. The command is similar to the previous Change Dimension command and is accessible from the Draw menu. AutoCAD is configured to load the global parameters from the acad.ini file. You can change these options by using the "acad" command.

The acad.ini file is an XML file that is loaded automatically when you open the application for the first time. The file is located in the following path:

`%localappdata%\AutoCAD\acad.ini` If you are running on Windows Vista or later versions, you can also change these options by using the Configuration

Manager tool. This tool is located in the Options menu. You can also save acad.ini as a new file. To do this, navigate to the following path:

`%localappdata%\AutoCAD\acad.ini` File suffix (.xml)

The file extension of acad.ini is.xml. This is because.ini is a text file format that is used by

---

Microsoft Windows applications and does not support Unicode characters. Language You can choose which language to load and the name of the file. The language can be set by following these steps: Navigate to the following path: Start > All Programs > Autodesk > AutoCAD > acad.ini Open the acad.ini file using an editor, such as Notepad. If you are working in the Turkish language, open acad.ini and look for the following line: [Settings] Set the language parameter to Turkish. To set the language in all acad.ini files, select acad.ini and open its properties (Right click > Properties), then click on the "Page properties" tab and check the "Load system file" checkbox. The system file is loaded and you are taken to the System Settings dialog. Click on the "Select language" button, then select "Turkish" from the drop-down menu. The system file is saved, but the settings
