If you're stuck with creating strong and secure passwords, Gaijin Password Generator might be your savior. Gaijin Password Generator has nothing to do with strangers or with the Japanese culture, but it has a lot to do with password generation. If your skill in coming up with strong and secure combinations is not that high, you can simply move towards an app that can do that for you. Changing the default language The application's default language is German, but it supports English as well as many other languages. If you are not finding the option to change the language, go to Extras, on the toolbar, and then look for the Sprache menu. In there you'll find the supported languages, as well as English. Generating the combinations The tool has four panes that deal with different actions regarding your passwords. The first one is named Simple, and it allows generating two types of combinations: readable and simple to remember. The difference between these templates is that the latter ones are built in a way they seem to resemble actual words, making them harder to forget. All created combinations can be found under the Generated Passwords menu, and from there, you can copy, delete, save, check, or encrypt them. Integrated password check The password checker is the final of the four panes, and it serves an important purpose. If you paste a password in there, a list with Notes and Requirements will be generated. The requirements fill you in about the string's length, strength, how many upper/lower case letters were used, and if there were any symbols or special characters used. As for the notes, they offer you almost the same information, the difference being that they go more in-depth. Encrypting a password In case you need special encrypted passwords for UNIX, PHP, and HTACCESS, you can easily do that from the Encrypt password tab, which is represented by the golden padlock on the toolbar. Furthermore, you can add an extra level of security to your combinations by generating checksums for them, in the form of MD5, SHA1, SHA256, and SHA512. All in all, Gaijin Password Generator seems to be a flexible tool for users who need to create passwords with all levels of protection. Pair it with a password manager, and you might not have to worry about having to create or remember passwords for a long time.Q: How to select rows in Oracle without including empty lines?

This application generates all the combinations you need for a strong password, with security as its main focus. Check out Gaijin Password Generator Free Download for Windows and find out why you should use it. In this Webinar presented by G-Data, learn how well-known brands, such as JCPenney, AOL, and Armani Exchange have used remote monitoring to create better customer experiences. Most brands have found it to be cost effective and efficient to measure customer interactions. Companies such as AOL, JCPenney and Armani Exchange use unique technology that enables a seamless user experience and allows them to optimize their product marketing across multiple channels. In this webinar, learn how the EEE of this solution will provide actionable insights on user patterns, to better guide their customer service and product marketing. Also learn about the features of this solution such as real time alerts, contextually relevant analytics, and predictive analysis that can be used to maximize customer engagement, and engage, re-engage and re-elect customers. Get an overview of the platform and functionalities of Armani Exchange's Customer Experience Management (CEM) offering. JCPenney continues to deliver a number of measurable customer experience initiatives that are helping to boost customer loyalty and accelerate the shift towards a more digitally-driven customer experience. AOL has launched an initiative that is driving more than 100M brand-driven conversations each day across AOL.com, AOL Live, and AOL mobile. The company uses Segment to capture, analyze, and understand customer behavior at the customer level and across channels, with the goal of providing customers with a seamless experience. John Steinberg from G-Data will be presenting at Interact 2012 in Las Vegas on Monday, October 8, 2012. In this presentation, Steinberg will share the insights gained from running a series of focus groups on how AOL's and JCPenney's customers talk to their brands. We'll use that insight to illustrate the ways that today's brands can use technology to analyze and act on customer experience. On Friday September 8th, G-Data will release a new study titled, "Measuring customer experiences: How well known brands have integrated remote monitoring to create better customer experiences." We will explore the methods and tools used by the well known brands that you probably interact with on a regular basis. We will define customer experience as not just what customers receive from you, but rather what they
