A 1993 IBM PC program overview (click image to enlarge) By the mid-1990s, AutoCAD was running on more than 70 different operating systems, AutoCAD has since been ported to the Amiga, Apple Computer's PowerPC and Intel platforms, and Windows. In 2015, AutoCAD 2017 received the Award for Technical Innovation from the National Academy of Inventors. AutoCAD, which debuted in December 1982, grew out of former MIT professor Ben Shneiderman's wish to build a lightweight CAD package for personal computers. Initially running on the Apple II and its ANTIC chip. The \$6,500 system included the Macintosh, Ethernet, RMS-12, and a data cartridge. The Macintosh provided the graphics display and the RMS-12 provided a storage drive and interface to the Macintosh. The original version of AutoCAD was limited to top-down line drawings, although the program could import various drawing formats (e.g., DXF, DGN, VDX, DWG, DXE, and CDR). The program supported a 30-point pen, two colors, and a "roughness" parameter, which controlled the drawing detail. There were about 100 model and component libraries in the program. These models included mechanical parts, such as bearings, gears, pulleys, nuts, bolts, washers, and wiring. A 5.5-inch floppy disk could hold up to 1,500 models. This original version of AutoCAD used the Macintosh's native 256K memory, and could read from and write to "PC Library" software modules. One library included drawing templates for large building projects. AutoCAD 1.0 didn't include any of the sophisticated 2D features found in competing programs. For example, if an object was moved, it was deleted from the drawing area. But in its first incarnation, the software could be used by a person with no experience of drawing. Unlike many competitors, AutoCAD could also be used by a single person in a team, rather than a single person working on their own. It could import and export

Right-Wingers Warn Hillary Clinton of Radical Groups Like the Black Lives Matter Movement Ever since Hillary Clinton conceded defeat on election night, Right-wing talking heads have been warning Americans of a coming insurrection by radical groups including Black Lives Matter and Antifa. They cite a recent right-wing conspiracy theory that the Democratic Party is using the Black Lives Matter movement to destroy the Republican Party. In reality, the Black Lives Matter movement is a coalition of mostly anti-police activists who protest against racially biased policing. The group, which gained notoriety after the police shooting of Michael Brown in Ferguson, Missouri, is opposed to police violence and wants the U.S. government to do more to address the issue. Black Lives Matter has called for increased protections of protesters and for the immediate dismantling of the criminal justice system. Right-wingers have blamed the Democratic Party for Black Lives Matter's rise. Fox News host Andrew Napolitano recently declared that the "Black Lives Matter movement is being orchestrated from the highest levels of the Democratic Party." The Black Lives Matter movement has gained support among activists, but the black community in general is strongly against it. Democratic leaders have largely condemned the movement's agenda, and a number of Democratic politicians have endorsed policies like criminal justice reform. Andrew Breitbart and Fox News have promoted the narrative that the Democratic Party is secretly collaborating with the violent and radical Black Lives Matter movement. Breitbart believes the Democratic Party is empowering these groups to silence criticism of Islam. "It's hard to overstate the extent to which the Democrat Party is now conducting war on conservatism," Breitbart told Sean Hannity. "It's a war they would like us to lose. And I mean that sincerely." Breitbart described the Democratic Party as a "globalist-Islamist coalition" that does not "share America's values." He insisted that the U.S.
