FREE. Sophos Anti-Virus Professional has received much praise for its stable software. This virus definition update has not only fixed many issues, but also allowed us to add many new features to this already excellent anti-virus tool. Using this very first (of many) free updates, we have completely revamped the user interface to make it more friendly, and now has more features than any other AV program. Some of the features include: - An improved user interface with more informative tool tips and

executed automatically each time you use a hotkey or combination of hotkeys. Each KeyMacro tool has a special section for keyboard shortcuts, which is where you can record and add these commands. You can access these shortcuts directly from the program window and add them to the list. KeyMacro also lets you set custom keyboard shortcuts for each section of the window, as well as global keyboard shortcuts to control all sections of the window. Now let's see how to get started with KeyMacro. Quick Start: 1.Download KeyMacro from its official website, and unzip the archive file. 2.Install the application, and run it once it's been unzipped and launched. 3.Click on the "Add/Remove" tab, and then click on the "Add" button. 4.Click on the "Browse" tab, navigate to the folder with the scripts that you want to add to the program and select them. 5.Enter a name for the script in the "Script Name" box, click on the "Add" button. 6.Click on the "Script" tab, and click on the "Add" button. 7.A new section is created for each hotkey you want to add, click on the "Add" button. 8.Enter a name for the section in the "Section Name" box, and then click on the "Add" button. 9.Click on the "Menu" tab, and then click on the "Add" button. 10.A new section is created for your main menu options, click on the "Add" button. 11.Enter a name for the menu in the "Menu Name" box, and then click on the "Add" button. 12.Repeat the above steps to create a few more sections for your menu options. 13.The KeyMacro program will be launched, now it's time to

configure your hotkeys. 14. Click on the "Hotkeys" tab, and then click on the "Add" button. 15. Click on the "New Hotkey" button. 16. Enter the key combination and what action you want to perform in the "Action" box, 80eaf3aba8

Blade Virus Scanner is a simple and straightforward antivirus system which focuses on identifying and eliminating Indonesia local viruses but also foreign ones. It packs other interesting features as well, catering to all types of users. This is a portable tool, so installing Blade Virus Scanner is not a requirement. You can just drop the program files anywhere on the hard drive and run the executable directly. Otherwise, the app can be moved to a USB flash drive or similar device, from where you can run it on any workstation with minimum effort. It's important to keep in mind that Windows Registry is not updated with new entries, and leftovers are not kept on the hard disk after removal. The interface of the application is made from a regular window with a plain layout. Blade Virus Scanner doesn't excel in the visual department of the GUI, but its options are well-organized into multiple tabs. In order to perform a scan, all you have to do is specify the target directory. The tool shows a progress bar along with total files, detected viruses, elapsed time and currently scanned file. When threats are found you can check out the name, location, size and additional information for each file. From this point on, you can either delete the infected items or send them to quarantine. However, it's not possible to select a particular action for individual files. Blade Virus Scanner

bundles a few tools useful for monitoring the system and ensuring its security: you can view the memory status (total, unused and residual RAM and virtual memory), system information (username, Windows and system directories) and drive details (size, used and free space). Plus, you can get the serial of your HDD, view active processes, encrypt files, explore directories, and remove the autorun.inf file from drives. It is possible to view the virus definitions, change the background color, mark a suspicious application as infected, as well as to access Windows tools (e.g. Command Prompt, Task Manager, Disk Clean Up, Registry Editor, Disk Defragmenter). The application is very light on the system resources, thus it doesn't interrupt user activity throughout the scan process. It has a good response time and carries out a scan rapidly. No error dialogs have been shown in our tests, and the app did not hang or crash. Unfortunately, Blade Virus Scanner has not been updated for a while. ...
