AutoCAD 2010 can create and edit 2D drawings and be used to create 3D objects, such as wireframe models, mechanical models, and drawings used to develop an architectural design. Drawing file formats supported include DWG, DXF, DWF, DWFx, and DWFxE. (The DWG file format is still in development and may be named DWG2. ) The user interface is designed to allow multiple users to collaborate on the same drawing file. The AutoCAD software suite includes many features and tools for the architects and engineers as well as for the general building community. Overview The user interface (UI) of AutoCAD is modeled on drafting table drawing software. The menu bar is the top-right area of the screen. From the menu bar, the user can access the command lines for computerized drafting functions. The commands are always accessible, even if you don't have any toolbars active. The toolbar is the upper-left side of the screen. The toolbar has buttons for all the functions available in the program. Each button has an icon to indicate what the command does. Hovering over an icon with your mouse causes it to pop up a tooltip. There are no standard commands. Each command is tailored to the type of drawing, task, or drawing environment. The majority of commands are listed in the menus. Many commands can be accessed by selecting the command in the menus and pressing the Enter key on the keyboard. The menus and toolbar can be customized by the user. Menus can be created by dragging and dropping icons, or by dragging and dropping text entries. Commands can be added by selecting them and pressing the Enter key on the keyboard, or by dragging and dropping text entries from the command bar. Tips for Using AutoCAD You can use the keyboard to select, move, and rotate objects in a drawing. These operations are described in more detail in the following sections. Move objects You can move or rotate objects by dragging and dropping them on the screen. You can also type in coordinates that will position the object at that location. You can move an object by dragging its selection marker. To move an object, drag its selection marker or text entry in the toolbar (see the following screenshot). The object will be moved to the location specified. If you don't press Enter, the coordinates will be displayed on the status bar. The Move to option is
