5:25pm. 101: Best Disk and Tape Drives.. 101 Email Credentials (Disc 1) \$49.99. How To Crack Or Re-Crack. The First Mention Of Cash Box.. For more info :-when I did it the first time, it seemed to be "un-thunar" like. sorry...I try to do a good job and never get something right! I'm not sure what it is you are trying to do, but to do it the right way, you need to go into the "settings" for Thunar, and just change the default file manager to file-roller. It is not going to mess with your Thunar add-ons or anything like that. I have that working and am working on a music player for Funambol which I will release soon. It uses the latest code and is a lot better than the one in the repos. The big change is it's a shell script, not Python. So far I've just compiled the source and made a distribution of that. I looked at that and all it

seems to be is the popular TM or Thunar manager. At least that's what I thought when I went there last night. If I'm mistaken, please correct me.

Q: Materialising a class with variable parameters Perhaps my question is really simple (excuse my ignorance) but I'm having some trouble creating a class that uses variable parameters. If you look at the structure of the code I want to use below:

```
public class Tag { public string Name { get; set; } public int MinAge { get; set; } public int MaxAge { get; set; } public string MinGender { get; set; } public string MaxGender { get; set; } } and then later on in the class: public List Tags = new List(); Tags.Add(new Tag { Age= 18,
