basic
authentication
header in a
WebApi controller
I have a service
class that gets to
connect to a rest
API. It's default
behavior is to get
a bearer token
and use this to
authenticate. I
would like the
same behavior for

a WebApi controller. How can I set the header without having to open up an IRequestMessageFilter that does the job? For further reading see this A: You're supposed to do that at the controller level. You can do it via the [Authorize] attribute. >> I've
