Once you have an SQLite database and a few playlists you get the hang of it. I use it to create playlists for my members of my site. You can do a lot with just a couple playlists. Sprintbit playlists are very, very useful for organizing and creating media based playlists, allowing you to switch between different formats, and other tasks that are totally reasonable for you to use. I also use it when creating my music playlists and i don't have an electronic keyboard to do everything myself, so using playlists gives me the freedom to sit, and do something else at the same time. With all the features, and possibilities it has, and i have to say, i love it, and recommend it!Q: Creating json/ objects in javascript while looping through b7e8fdf5c8
