These programs typically cost less than Photoshop and are available at the point-and-shoot level. And some people who use Photoshop think of them as Photoshop alternatives. ## Getting Comfortable with Layers Layers enable you to place objects and effects at specific depths in the image, change them in an unlimited number of ways, and combine effects into layers by using layers as groups. Layers are the basis of the file-based system Photoshop uses for editing. You can work with only one layer at a time or with as many layers as you have space on your hard disk. Photoshop is a very user-friendly program when it comes to layering in that it automatically creates layers whenever you create a new document. You don't have to worry about making a layer when you create a document — Photoshop creates one for you, if you want. But there's a catch: If the original image contains several layers, you need to know how to collapse and expand layers. ## Image Layers: From Unto the Abyss In Photoshop, you can apply and adjust various properties to layers, including effects, exposure, layer type, and transparency. Different layers contain different properties and can therefore be treated differently when you manipulate them.

High-yield production of 2,5-dimethylpyrazine and 2,3,5-trimethylpyrazine via the microwave-assisted one-pot reaction of 2,4,5-trimethylpyrazine with ethyl cyanoacetate. 2,5-Dimethylpyrazine (DMP) and 2,3,5-trimethylpyrazine (TMP) are important trace components in food products. Therefore, their high-yield production via an environmentally friendly and efficient method is highly desirable. Herein, we report a microwave-assisted one-pot reaction of 2,4,5-trimethylpyrazine (TMP) with ethyl cyanoacetate (ECA) to produce DMP and TMP. The influence of the key parameters, including temperature and reaction time, was investigated. Furthermore, it was shown that the microwave-assisted one-pot reaction could be scaled-up to an extremely high yield of DMP/TMP (65.5% w/w, 46.7% yield on conversion basis). To the best of our knowledge, this is the first report on a high-yield production of DMP/TMP using microwave-assisted one-pot reaction. Q: Compiling 64bit application on 32bit machine I've been struggling with this issue for a while now. If I compile a 64bit application that refers to 32bit native API functions like `vcrun32` in my `main.cpp` I have some exceptions related to VC++ complaining about "unsafe DLL calling convention". For example, this code: `#include int WINAPI DllMain(HINSTANCE, DWORD, long) {return 1;}` gives an exception: `LNK2005 __imp__close@12 already defined in libEGL-win32.dll` There are several question on SO already, but none of them helps. I tried all solutions, including changing the EXE to a DLL, changing the DLL to a DLL, getting rid of VC++ dependencies - nothing works. The strange thing is that I have another program compiled the same way and it is compiling without errors. A: You are trying to create an executable from a 64-bit application.
