System Of A Down - Steal This Album.Q: Replace ErrorMessage in JSF 2 I have a jsf page that validates a user name and password. When the user name and password does not validate, I get the string "ErrorMessage": "The user name or password provided is incorrect." I want to change this error message to "Please enter valid user name and password." I tried using the in-built javascript functions, but it did not work. Does anyone know of a good way to do this? This is the validation I'm using. c6a93da74d
