
Amplus Led Display Software

Hi Hadi, How the date is entered, the time or the number of hours, depends on your processing of the hours. For example, you can enter a date and a time, and specify that you want the time to be in a specific hour. If the date is entered as 00/00/0000, then the time to be entered will be the default time of the day in the cell. If the date is entered as a standard date, as in this case: 08/15/2017, the time will be 08:00 in the cell. You have to change the cell format so the date is displayed as hh:mm. The way you get the time is by entering a formula, like =TIME(value entered for Hour, value entered for minutes, 0.00, 0, 0) To automatically use the time in a cell, first, create a field in the table, or in the cell range you want to display the hours, in another cell, enter this formula: =IF(value entered for hours is the default hours for the cell, enter the value you want to display for the date in the TIME function. This should replace the value entered for the hours. Please note that time is always viewed as an integer, so you will have to format the cell as [h]:mm if you want to display the time with decimals. To format a cell as [h]:mm, use the formula ="00:00" Cheers, Catalin Hi Carlo, these formulae are working really well for calculations where there are values entered in the cells as above. But when we have rows that dont have data in them what is displayed is a 414**number, which I assume is the excel time format. I need these cells to stay blank when there are no patient details entered in them. I have tried conditional formatting, but that ends up displaying values I dont want, and not displaying values I do want. How do I fiddle with the formula to only show values when there is data entered in the required cells
