it becomes something of an affront to eventually read that the author is now taking a graduate level class on the theory of software for a masters degree and suddenly has a new found understanding that not everyone benefits from open source. that this theory, new to him or not, should have made it into a college text book shows that it is fundamental to the field and that he has brought to their attention something that until now

they had no inkling existed.  
it is also part of the reason  
for my annoyance with the  
writer who apparently finds  
the point of a growing  
number of open source  
projects is their dissection  
for free and that maybe  
theres a market for what  
they are doing that they  
can cash in on by going  
proprietary, where as by  
doing so they reduce the  
possibility of monetization  
and also increase the  
number of people who get  
trained up on how to break

their software. now i actually took a graduate-level college class on software security and the idea is that every new technology is compromised at some point. a utility that isnt compromised should have 3 versions with each version benefitting from the others limited functionality. an idea that seems obvious now, as it should have been obvious to you then.
