The first thing to hit the home button in Elements 11 is the “New” tab. Before discovering the new tab, I had to stumble upon it through the plethora of icons and menu items on the menu bar and the task I was trying to achieve before getting to the “New” tab. From the new tab, it is a short jog to the new “Shapes” feature. The shape tool as you are used to it; however, now you can work on both 3D objects and 2D objects in your image. The 2D shapes are what is reorganized - even though it is not all that new. I couldn't help but be leery of the new “Shapes” because I already use it extensively on my other graphic program. However, upon seeing the new tool, I could have left my worries behind and begun work. Quite often, layers don't simply extend across every layer in the image, but feature some kind of inset. To be honest, I don't remember Elements very well, but some of the 2D shapes were fully inset. I had to change the layer settings and think about what I was doing - it took me awhile to figure out the inset. Having that happen so often made me really think about how it should work. In my long history of using the shape tools, I do not recall any significant changes from the old version. It's a good thing for Elements because the old version was so often overlooked. I think I will be glad to see improvements in each Elements release. Lightroom has always been great at getting things done, but it's always been a little quirky. For the past few years, workflow issues have been minimal, the biggest complaints have been that the application wasn't really ready for import of raw files at large sizes (usually at the time of first release).

In the end, a graphic designer's job is to “create” a compelling design that grabs the attention of your audience. That design is made up of layers and objects, some of which are invisible. The layers are the foundation of our design, and they are what we manipulate. A good graphic designer needs to be skilled in manipulating layers. This is where layers come in handy. Layers should be used to construct our designs like a giant puzzle. They can be used to construct our entire graphic from the ground up, or they can be used to add a “frosting” to existing elements. e3d0a04c9c
